Chuck:

Thanks. I'll put you on the agenda.

When I first heard the news, my thoughts were: what about secondary containment and what about downstream notification? Welcome to the real-world.

Hi Robert,

We can talk about it. I'm not really involved. It has become an HWD/OSC problem now. But Vicky is involved with them. It certainly is a Source Water Protection issue. Vicky is calling it the "perfect storm". I don't think she will be around for the call, but we can talk about it.

Chuck:

Thinking about agenda topics for the January 28 SWP call.

What about the West Virginia chemical spill and PWS impacts? Have you been involved in this from a SWP viewpoint? It would be interesting to touch on what did or did not happen, what should have happened, and what we should apply to other PWSs and SWP areas.

While this issue is in the news, it would be a good time to raise awareness about SWP.

Thanks.
